

Sionna Therapeutics

*On a Mission to
Revolutionize the
Cystic Fibrosis
Treatment Paradigm*

August 6th 2026

sionna[™]

Disclaimers and forward-looking statements

This presentation contains forward-looking statements of Sionna Therapeutics, Inc. (“Sionna”, “the Company”, “we”, “us”, or “our”) that involve substantial risks and uncertainties. All statements other than historical factual information are forward-looking statements, including without limitation statements regarding our goal of transforming the treatment paradigm for CF and providing clinically meaningful benefit for patients, including the potential for wild-type CFTR function and half-life; the initiation, timing, progress and results of our research and development programs, preclinical studies, and clinical trials and studies, including the expected timing of topline data from our Phase 1 healthy volunteer combination trial and our Phase 2a proof-of-concept trial; our ability to replicate positive results from earlier preclinical studies or clinical trials conducted by us or third parties in current or future clinical trials; our ability to develop and advance our current and future product candidates and programs; our ability to demonstrate that our product candidates are safe and effective for their proposed indication and our expectations around their beneficial characteristics and therapeutic effects; our ability to advance our current and future product candidates through applicable regulatory approval processes; the implementation of our business model and strategic plans; our estimates regarding the market opportunity of our product candidates; our ability to rely on third-party manufacturers and successfully manufacture our product candidates for preclinical use, for clinical trials and on a larger scale for commercial use, if approved; our ability to maintain, expand and protect our intellectual property; our ability to enter into future license agreements and collaborations; general economic, industry, and market conditions, including rising interest rates and inflation; our ability to attract and retain key scientific and management personnel; our ability to compete effectively with existing competitors and new market entrants; and our expectations regarding our pipeline, operating plan, use of capital and capital requirements, expenses and other financial results, including our cash runway projection. In some cases, you can identify forward-looking statements because they contain words such as “may,” “will,” “shall,” “should,” “expects,” “plans,” “anticipates,” “could,” “intends,” “target,” “projects,” “contemplates,” “believes,” “estimates,” “predicts,” “potential,” or “continue” or the negative of these words or other similar terms or expressions that concern our expectations, strategy, plans or intentions, although not all forward-looking statements are accompanied by such words. Forward-looking statements are based on assumptions and assessments made by our management in light of their experience and perceptions of historical trends, current conditions, expected future developments and other factors they believe to be appropriate, and speak only as of the date of this presentation.

Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause our actual results, performance or other events to be materially different from any future results, performance or other events expressed or implied by the forward-looking statements. Given these uncertainties, you should not place undue reliance on forward-looking statements. Our actual future results, performance or other events may be materially different from what we expect. Except as required by law, we assume no obligation to update these forward-looking statements, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future. Factors that could cause actual results to differ from those predicted in our forward-looking statements include, among other things: the initiation, timing, progress, and results of our planned and future clinical trials; our ability to replicate positive results from earlier preclinical studies or clinical trials conducted by us or third parties in current or future clinical trials; our ability to demonstrate that our NBD1 stabilizers, complementary CFTR modulators, and any potential future product candidates are safe and effective for their proposed indications and our expectations around their beneficial characteristics and therapeutic effects; our ability to advance our current programs and any potential future product candidates through applicable regulatory approval processes, including timing of U.S. Food and Drug Administration approval, if any, of our current and any future product candidates; our estimates of the number of patients that we will enroll and our ability to initiate, recruit and enroll patients in and conduct and successfully complete our clinical trials at the pace we project; the implementation of our business model and strategic plans; our ability to rely on third-party manufacturers; the size and growth potential of the cystic fibrosis market for our programs and our ability to serve those markets; our ability to realize the benefits of collaborations for the development and commercialization of our programs or any other potential future product candidates; our ability to maintain, expand and protect our intellectual property; developments relating to our competitors and our industry; existing regulations and regulatory developments in the United States and other jurisdictions; general economic, industry, and market conditions, including potential tariffs implications, supply chain disruptions, rising interest rates and inflation; our ability to attract, hire, and retain our key personnel and additional qualified personnel; and those risks and uncertainties identified in our filings with the Securities and Exchange Commission (the “SEC”), including our Annual Report on Form 10-K, filed on March 2, 2026, as well as any subsequent filings with the SEC. These risks are not exhaustive. New risk factors emerge from time to time, and it is not possible for our management to predict all risk factors, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in, or implied by, any forward-looking statements.

Market data and industry information used throughout this presentation are based on management’s knowledge of the industry and the good faith estimates of management. We also relied, to the extent available, upon management’s review of independent industry surveys and publications and other publicly available information prepared by a number of third-party sources. All of the market data and industry information used in this presentation involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such estimates. Although we believe that these sources are reliable as of their respective dates, we cannot guarantee the accuracy or completeness of this information, and we have not independently verified this information. Projections, assumptions and estimates of our future performance and the future performance of the industry in which we operate are necessarily subject to a high degree of uncertainty and risk due to a variety of factors. These and other factors could cause results to differ materially from those expressed in our estimates and beliefs and in the estimates prepared by independent parties. The trademarks included herein are the property of the owners thereof and are used for reference purposes only. Such use should not be construed as an endorsement of such products. This presentation discusses product candidates that are investigational only and have not yet been approved for marketing by the U.S. Food and Drug Administration. No representation is made as to the safety or effectiveness of these product candidates for the use for which such product candidates are being studied.

Sionna Overview

Leadership with track record capable of disrupting the CF market

---	--	--	--	---	--	--	---	---	---

Sionna leverages over 15 years of pioneering CFTR research and development to advance next-generation of CF therapies

Sionna's novel approach focused on stabilizing NBD1 has the potential to revolutionize the current CF treatment paradigm

HIGH UNMET NEED IN LARGE MARKET

Despite current treatments, >2/3rd of patients do not have normal CFTR function¹

Today's market is >\$12B², expected to be \$15B-\$17B by 2030³

NBD1, A CRITICAL CF TARGET

We believe NBD1 has the potential to deliver full CFTR function, and none of the approved CFTR modulators directly stabilize NBD1

PREDICTIVE ASSAY / BIOMARKERS*

Industry standard CFHBE assay and sweat chloride biomarker have been highly predictive of clinical outcomes for approved CFTR modulators

FRANCHISE DRIVES STRATEGIC OPTIONALITY

Robust clinical stage pipeline of NBD1 stabilizers and complementary modulators provides multiple potential paths to transform the standard of care for CF patients

CF is an established rare, progressive and life-threatening genetic disease that can cause debilitating multi-system complications

Manifestations of Cystic Fibrosis

~106K patients with CF across 94 countries¹

~90% of people with CF carry the **F508del mutation**², which is Sionna's target population

Predicted median survival is 65 years for a patient born in the U.S. between 2020 and 2024³

>2/3rd of patients on Trikafta[®] do not have normal CFTR function, as measured by sweat chloride^{4,5}

We believe stabilizing NBD1 is central to unlocking meaningful improvements in clinical outcomes for CF patients

The Importance of NBD1

~90% of people with CF have a F508del mutation; **F508del resides within the NBD1 domain of CFTR**

F508del severely destabilizes CFTR, preventing its normal folding, trafficking, and function

None of the approved CFTR modulators directly stabilize NBD1

We believe stabilizing NBD1 is the key to normalizing CFTR function

Sionna has a robust and differentiated pipeline, with several near-term clinical milestones

ADD-ON TO STANDARD OF CARE NBD1 Stabilizer + SOC

PROGRAM / MECHANISM	PRECLINICAL	PHASE 1	PHASE 2	UPCOMING MILESTONES
SION-719 NBD1				Complete Ph 2a POC, TLD Summer 2026

PROPRIETARY DUAL COMBINATIONS NBD1 Stabilizer + Complementary Modulator

PROGRAM / MECHANISM	PRECLINICAL	PHASE 1	PHASE 1 COMBO	PHASE 2	UPCOMING MILESTONES
SION-451 NBD1					Complete Ph 1 HV dual combo, TLD Summer 2026
Galicaftor* SION-2222 TMD1					
SION-451 NBD1					Complete Ph 1 HV dual combo, TLD Summer 2026
SION-109 ICL4					

Lifecycle Development

PROGRAM / MECHANISM	PRECLINICAL	PHASE 1	PHASE 2
SION-2851 TMD1			
Navocaftor* SION-3067 Potentiator			

Our vision is to build a CF franchise anchored by our NBD1 stabilizers to deliver meaningful clinical benefit to CF patients

While we have prioritized development of a proprietary dual combination, we believe both development pathways offer attractive commercial opportunities

Meaningful progress has strengthened our foundation, paving the way for near-term execution

Clinical Execution

- ✓ Positive Ph 1 data from single agent NBD1 stabilizers SION-719 and SION-451
- ✓ Completed enrollment in the SION-719 Ph 2a POC trial

Near-Term Milestones

- ✓ Ongoing Ph 2a PreciSION CF POC trial of SION-719 added to SOC, on track for data summer 2026
- ✓ Ongoing Ph 1 HV trial of SION-451 in dual combinations, on track for data summer 2026

Scientific Progress

- ✓ Presented new preclinical data showing SION-719 and SION-451 increased F508del-CFTR half-life up to wild-type levels, further underscoring NBD1 potential

Strong Financial Position

- ✓ Cash position of ~\$268 million as of 2Q26
- ✓ Runway into 2028

Sionna's translational CFHBE model is shaped by over a decade of expertise and critical to our strategy supporting NBD1's differentiation

Our approach leverages the clinically predictive CFHBE model, using 20% human serum, designed to more closely simulate the *in vivo* environment

We successfully validated our model by replicating published clinical results

In addition to positive outcomes, our model has successfully predicted negative clinical trial outcomes

Assay expertise has been honed with over a decade of experience by our team

*NBD1 Stabilizers:
SION-719 & SION-451*

SION-719 and SION-451: novel NBD1 stabilizers advancing to next phase of development

Mechanism of Action

- NBD1 Stabilizers

Rationale and Enthusiasm for Advancement

- In Phase 1 single agent SAD/MAD HV trials, both SION-719 and SION-451 exceeded desired PK targets
 - SION-719 selected as add-on to SOC NBD1 based on high potency at low doses
 - SION-451 selected as NBD1 anchor in dual combinations based on high overall exposures

Status

- Phase 1 SAD, MAD, and FE/BE completed for both compounds
- SION-719 PreciSION CF Phase 2a POC in CF patients has completed enrollment
- SION-451 Phase 1 HV dual combination trial with SION-2222 (galicaftr) and SION-109 is ongoing

Key Upcoming Milestones

- Topline data from ongoing SION-719 Phase 2a POC trial in CF patients expected summer 2026
- Topline data from ongoing SION-451 Phase 1 HV dual combination trial expected summer 2026

Use Case

- SION-719 as add-on to SOC and SION-451 as anchor to proprietary dual combination
- Target the ~90% of the CF population that carry the F508del mutation

SION-719 and SION-451: single agent SAD/MAD Phase 1 trial summaries

Single agent SAD/MAD Phase 1 trials of SION-451 and SION-719

- Evaluated the safety, tolerability, and PK profiles of single and multiple ascending doses of SION-719 and SION-451 in healthy volunteers
- 3:1 randomized, double-blind, placebo-controlled studies in Australia
- SAD/MAD parts dosed as oral suspension (fasted unless noted); MAD dosing duration of 10 days
- FE/BE Part C evaluated the effect of food on PK and bioequivalence of a tablet formulation compared to oral suspension

SION-719

- 100 total subjects dosed:
 - SAD: 20mg (fasted & fed), 40mg, 80mg, 160mg
 - MAD (BID): 20mg, 40mg, 80mg, 120mg, 160mg
 - FE/BE Part C: doses in add-on to SOC and dual combo ranges

SION-451

- 110 total subjects dosed:
 - SAD: 25mg (fed), 75mg (fasted & fed), 150mg, 300mg, 450mg
 - MAD (BID): 25mg (fed), 75mg, 150mg, 225mg, 300mg
 - FE/BE Part C: doses in add-on to SOC and dual combo ranges

SION-719 exceeded target exposures in single agent Phase 1, making it an attractive candidate as add-on to SOC given high potency at lower doses

Add-on target coverage at all doses studied; dual combination coverage at ≥ 40 mg BID

High potency and synergy with SOC support lower dose SION-719 for Phase 2a POC trial

Part C data support use of the tablet in future studies and indicate SION-719 can be dosed in fed or fasted state

MAD PK Summary Day 10 Through 36 Hours Post-administration

Each solid line shows mean concentration data from a dosing cohort on Day 10

SION-719 single agent SAD/MAD Phase 1 data suggest favorable tolerability profile

SION-719 MAD Safety Summary

Study Participants (n)*	Placebo BID (n=10)	20 mg BID (n=6)	40 mg BID (n=6)	80 mg BID (n=6)	120 mg BID (n=6)	160 mg BID (n=6)	MAD Total (n=40)
Any TEAE, n (%)	4 (40)	2 (33)	4 (67)	6 (100)	5 (83)	3 (50)	24 (60)
Mild (Grade 1)	3 (30)	2 (33)	3 (50)	5 (83)	2 (33)	3 (50)	18 (45)
Moderate (Grade 2)	1 (10)	-	2 (33)	1 (17)	3 (50)	1 (17)	8 (20)
Severe (Grade 3)	-	-	-	-	-	-	-
Life-threatening (Grade 4)	-	-	-	-	-	-	-
Leading to treatment discontinuation	-	-	-	-	-	-	-
Serious TEAEs, n (%)	-	-	-	-	-	-	-
Most frequent TEAEs (≥2 subjects), n (%)							
Headache	-	-	4 (67)	1 (17)	2 (33)	2 (33)	9 (23)
Diarrhea	1 (10)	1 (17)	-	-	-	2 (33)	4 (10)
Nausea	1 (10)	-	1 (17)	-	-	1 (17)	3 (8)
Catheter site phlebitis	-	-	-	-	2 (33)	-	2 (5)
Pruritus	1 (10)	-	-	-	-	1 (17)	2 (5)

SION-719 SAD, MAD, and FE/BE Safety Highlights

- No SAEs; Most TEAEs were mild to moderate (Grade 1 or Grade 2)
- No TEAEs led to discontinuation of drug and no dose-limiting TEAEs observed
- No TEAEs related to LFTs in treated subjects
- No clinically meaningful trends in other safety parameters, vital signs or ECG parameters

SION-719's potency at low doses potentially enables a differentiated profile when added to SOC

Potential of SION-719 as an add-on to SOC*

Phase 1 PK data indicate potential for **clinically meaningful benefit, including to wild-type levels, as add-on to SOC** based on CFHBE target zone

Minimum CFHBE target represents at least 10 mmol/L SwCl and ~3 ppFEV₁ improvement

SION-451 is our preferred anchor for dual combinations given exposures achieved in target concentration zones in single agent Phase 1

Dual combination target coverage at ≥ 75 mg BID; add-on target coverage at all doses studied

High exposures support evaluating SION-451 upper dose range in Ph 1 HV dual combination

Part C data support use of the tablet in future studies and indicate SION-451 can be dosed in fed or fasted state

MAD PK Summary Day 10 Through 36 Hours Post-administration

Each solid line shows mean concentration data from a dosing cohort on Day 10

SION-451 single agent SAD/MAD Phase 1 data suggest favorable tolerability profile

SION-451 MAD Safety Summary

Study Participants (n)*	Placebo BID (n=9)	25 mg BID (n=6)	75 mg BID (n=5)	150 mg BID (n=6)	225 mg BID (n=6)	300 mg BID (n=6)	MAD Total (n=38)
Any TEAE, n (%)	5 (56)	2 (33)	3 (60)	3 (50)	4 (67)	2 (33)	19 (50)
Mild (Grade 1)	4 (44)	2 (33)	2 (40)	1 (17)	4 (67)	-	13 (34)
Moderate (Grade 2)	1 (11)	-	1 (20)	1 (17)	-	2 (33)	5 (13)
Severe (Grade 3)	-	-	-	1 (17)	-	-	1 (3)
Life-threatening (Grade 4)	-	-	-	-	-	-	-
Leading to treatment discontinuation	-	-	-	-	-	-	-
Serious TEAEs, n (%)	-	-	-	-	-	-	-
Most frequent TEAEs (≥2 subjects), n (%)							
Headache	3 (33)	1 (17)	-	-	2 (33)	1 (17)	7 (18)
Influenza	-	-	-	2 (33)	-	-	2 (5)
Upper Respiratory Tract Infection	1 (11)	-	-	1 (17)	-	-	2 (5)

SION-451 SAD, MAD, and FE/BE Safety Highlights

- No SAEs; Most TEAEs were mild to moderate (Grade 1 or Grade 2)
- No TEAEs led to discontinuation of drug and no dose-limiting TEAEs observed
- 1 Grade 1 TEAE related to LFTs observed in a treated subject who tested positive for influenza¹; no TEAEs related to LFTs in other cohorts
 - Same subject had transient Grade 3 neutropenia at same time as influenza
- No clinically meaningful trends in other safety parameters, vital signs or ECG parameters

SION-451 in a dual combination has the potential to provide a superior treatment option for people living with CF

Potential of SION-451 in dual combination*

Phase 1 PK data indicate potential for **clinically meaningful benefit, including to wild-type levels, in a dual combination** based on CFHBE target zone

Minimum CFHBE target represents at least 10 mmol/L SwCl and ~ 3 ppFEV₁ improvement

New preclinical data show NBD1 stabilizers restored CFTR half-life up to wild-type levels

Our NBD1 stabilizers have the potential to restore both CFTR half-life and CFTR function

Metabolic pulse-chase analysis studies show NBD1 stabilizers SION-719 and SION-451 increased the half-life of mature F508del-CFTR to levels seen with wild-type CFTR, adding to the growing body of evidence supporting the differentiation of NBD1

*Lead Complementary Programs:
Galicaftor (SION-2222) & SION-109*

Galicaftor (SION-2222): TMD1-directed CFTR corrector is currently being evaluated in combination with NBD1 stabilizer SION-451

Mechanism of Action

- TMD1-directed CFTR corrector

Rationale and Enthusiasm for Advancement

- Galicaftor (SION-2222) synergized with NBD1-directed stabilizers in CFHBE assay
- Phase 2 study M19-530 demonstrated sweat chloride and ppFEV₁ outcomes in combination with navocaftor (SION-3067, CFTR potentiator) comparable to approved duals (Symdeko and Orkambi)¹, based on indirect cross-trial comparison

Status

- Phase 2 trials evaluating galicaftor and navocaftor completed²
- Phase 1 healthy volunteer dual combination trial with SION-451 is ongoing

Key Upcoming Milestones

- Topline data from Phase 1 healthy volunteer dual combination trial with SION-451 expected summer 2026

Use Case

- Part of a Sionna proprietary dual combination
- Target the ~90% of the CF population that carry the F508del mutation

Clinical activity similar to Symdeko[†] observed in phase 2 combination of galicaftor (SION-2222) + navocaftor (SION-3067)

Ph 2 M19-530 trial¹ in CF patients homozygous for F508del mutation:

- **Galicaftor/navocaftor dual combination increased pulmonary function in CF patients**
- **Galicaftor/navocaftor dual combination showed clinical activity** at 200 mg QD/150 mg QD and 300 mg QD/150 mg QD doses studied
- **Improved ppFEV₁** and reduced SwCl concentration at 28 days for 200mg and 300mg doses of galicaftor – responses comparable to approved dual combinations Symdeko^{2†} and Orkambi^{3†}

SION-109: ICL4-directed CFTR corrector is currently being evaluated in combination with NBD1 stabilizer SION-451

Mechanism of Action

- ICL4-directed CFTR corrector

Rationale and Enthusiasm for Advancement

- SION-109 synergized with NBD1-directed stabilizers in the CFHBE assay
 - Promising profile and tractable predicted target clinical dose
 - Dual combination with either of our NBD1 stabilizers resulted in wild-type levels of CFTR function in the CFHBE assay

Status

- Phase 1 healthy volunteer dual combination trial with SION-451 is ongoing

Key Upcoming Milestones

- Topline data from Phase 1 healthy volunteer dual combination trial with SION-451 expected summer 2026

Use Case

- Part of a Sionna proprietary dual combination
- Target the ~90% of the CF population that carry the F508del mutation

SION-109 (ICL4): Single agent SAD/MAD Phase 1 Summary

Single agent SAD/MAD Phase 1 clinical trial of SION-109

- Evaluated the safety, tolerability and PK profile of single and multiple ascending doses of SION-109 in 102 healthy volunteers; single doses 50 mg to 400 mg, multiple doses 50 mg BID to 150 mg BID
- 3:1 randomized, double-blind, placebo-controlled study in the U.S.
- SAD/MAD parts dosed as oral suspension; also evaluated the effect of food on PK and bioequivalence of a tablet formulation compared to oral suspension in 15 subjects
- FE/BE Part C: 100 mg single dose (x 3) dosing complete

SION-109 Phase 1 data suggests an encouraging tolerability and PK profile

- Dosing generally well tolerated
- No SAEs; most AEs were mild to moderate
- SAD and MAD PK showed target mean trough concentration from CFHBE assay achieved at 75 mg BID and higher doses
- PK consistent with BID dosing

Clinical and Portfolio Strategy

Sionna's development strategy is data-driven with multiple near-term milestones

Add-On to SOC

PreciSION CF
Ph 2a POC Trial
SION-719 + SOC
NBD1

Advancement to Ph 2b dose ranging
will be data driven and
dependent on access to capital

Dual Combination

Ph 1 Healthy Volunteer Dual Combo
SION-451 + SION-2222
NBD1 TMD1

Ph 1 Healthy Volunteer Dual Combo
SION-451 + SION-109
NBD1 ICL4

Dual Combination
Selection

Ph 2b Dual Combination Dose Ranging
SION-451 + SION-2222 or SION-109
NBD1 TMD1 ICL4

PreciSION CF Phase 2a proof-of-concept trial - enrollment completed

Evaluating low-dose SION-719 added to Trikafta®

Objectives are to demonstrate that NBD1 is mechanistically unique from, and synergistic with the components of Trikafta, and that adding a low dose of NBD1 to Trikafta is associated with improved CFTR function

PreciSION CF Phase 2a proof-of-concept trial on track for readout this summer

Definition of Success

- Improvement in SwCI of **≥ 10 mmol/L** in F508del homozygous patients
- Alyftrek Ph 3 data showed a 3.2 mmol/L SwCI improvement in F508del homozygous patients¹

Benchmark Rationale

- A 10 mmol/L reduction in SwCI has corresponded to **~ 3 ppFEV₁** improvement
- KOLs consistently define **this magnitude of change as clinically meaningful**
- Historically, modulators achieving this level of benefit have **shifted treatment paradigm**

If Successful

- Demonstrates **NBD1 is mechanistically differentiated**
- Validates our **CFHBE assay** predictions
- Supports **rationale for proprietary NBD1 dual combination** therapy

A successful POC would demonstrate NBD1 stabilization has the potential to drive clinically meaningful benefit

Healthy volunteer Phase 1 dual combination trial ongoing: *Evaluating safety, tolerability, and PK of SION-451-based dual combos*

Objective is to evaluate different doses of SION-451 in combination with SION-2222 and with SION-109 in healthy volunteers and select the NBD1-based dual combination to advance to Phase 2b trial in patients with CF

*Commercial Opportunity
&
Unmet Need*

Significant commercial opportunity exists for our NBD1-led franchise to provide a potentially transformative treatment for CF, if approved

Growing Target Population

~**106K** patients with CF across 94 countries¹

~**90%** patients have at least one F508del-CFTR mutation²

CF population continues to grow at ~**2%** annually³

More Treatment Options are Needed

>**2/3** of patients on SOC do not have normal CFTR function^{4*}

>**6,000** patients have discontinued use of approved CFTR modulators⁵

>**20%** of eligible patients are currently **not on CFTR modulators**⁶

CNS side effects reported (mood disturbances^{7,10}, depression¹⁰, mental foginess⁷)

Non-responders or patients with tolerability challenges have **limited or no alternatives**⁷

Large Market Opportunity Primed for Disruption

~**\$12B**
worldwide revenues of CFTR modulators today⁸

\$15B-\$17B
opportunity by 2030⁹

Despite advancements in treatment, the unmet need remains high, as many CF patients on treatment do not achieve normal CFTR function

>2/3rd of patients on Trikafta do not have normal CFTR function^{1,2}

as measured by sweat chloride < 30 mmol/L

~69% of Alyftrek patients in two Phase 3 clinical trials conducted by Vertex did not achieve normal CFTR function³

Reductions in sweat chloride are associated with better long-term outcomes for patients

Data show that lower sweat chloride continues to correlate with FEV₁ gains

We believe NBD1 stabilizers are the key to getting more patients to normal CFTR function

Registry-based study of 25,753 CF patients demonstrated that lower SwCl is a predictor for longer-term survival¹

Data from clinical trials shows that FEV₁ continues to improve with lower SwCl²

Closing

Sionna's innovative approach to CFTR restoration has the potential to disrupt the CF market, and is well-funded to execute with cash into 2028

**HIGH UNMET NEED
IN LARGE MARKET**

Today's CF market
is ~\$12B¹,
expected to be
\$15B-\$17B by 2030²

**NOVEL
MECHANISM**

Differentiated
approach targeting
NBD1, a key
mechanism to
potentially restore
F508del CFTR
function

**POTENTIALLY
TRANSFORMATIVE
MEDICINES**

Proven execution
with multiple
trials completed
and more ongoing

Goal is to
transform the CF
standard of care

**KEY NEAR-TERM
CATALYSTS**
